Incorporating Reflexology into Your Life

Footprints for Health

You walk on them all day, but did you know your feet do more than carry you from one place to the next? They also have a unique connection to balanced health and well-being. In a form of bodywork known as reflexology, the feet are said to contain reflex areas that mirror and connect to all parts of the body--and pressure on these points can actually influence your state of health.

What is Reflexology

The roots of reflexology draw, in part, from the ancient healing art of foot massage, practiced the world over, from Asian and Egyptian civilizations to tribal communities of the Americas. Early archaeological digs have revealed statues

relaxation technique. Using the thumb, finger, and hand, gentle pressure is applied to reflex areas of the feet in order to decrease stress and bring the body into equilibrium. While some reflexologists also apply treatment to the hands and ears, the foot--with its greater quantity of sensitive nerve endings--is considered the most amenable to this approach.

Although simplistic in application, the effects of the treatment can be profound. Through activation of nerve receptors in the hands and feet, new messages flood into the body system, changing its tempo and tone. In essence, the foot or hand becomes a conduit for sharing information throughout the

The foot has a greater quantity of sensitive nerve endings than other body parts.

of Buddha in China and Japan, and Vishnu (a Hindu god) in India, depicting markings of specific areas on the feet. But it has only been within the last century that this work has established a foothold, so to speak, in Western practice.

As we know it today, reflexology is viewed primarily as a stress reduction or

body. Function in the connecting area is improved and, at the same time, the body experiences overall relaxation and benefits to the circulation and elimination systems. When the body's systems are at optimal functioning, self-healing is enhanced.

In this sense, reflexology is not a medical treatment for specific symptoms or diseases, but rather a way to facilitate the body's inherent healing power. Therefore, it stands to reason that paying attention to your feet can also be a great preventive measure and one easily incorporated into a daily routine.

How and why reflexology works the way it does is still up for debate. Some say it involves communication through the nervous system; other theories point to opening blockages of chi, or vital energy, in the body. Regardless, scientific studies have documented its benefit for a variety of ailments, ranging from acute disorders to chronic diseases. The majority of reflexology research has come from China where the technique is commonly used in hospitals and homes for both health maintenance, and as adjunct to medical care. Some of the positive findings include reduction of pain, improvement in circulation, release of tension, and improved effectiveness of medication, as well as benefits for diabetes and headaches.

Fancy Footwork

Kevin Kunz, author of several reflexology books and codirector of the Reflexology Research Project, emphasizes the importance of making reflexology a part of your life. Consistency is key if you expect results, and foot homework is a low-cost, efficient way to extend the benefits of weekly sessions with your reflexologist. The techniques can be practiced even while you're busy doing something else. You can purchase devices such as foot rollers for use under the desk, but even inexpensive homemade devices will do, Kunz says. "You can put a golf ball in a sock, tie it up, and you have a roller. Anything to cause stimulation has a beneficial effect."

Reflexology is also a safe and effective technique for infants and children, soothing their emotions and promoting sleep. Naturally available and noninvasive, this approach can enhance communication between parent and child and aid in developing the child's physical awareness.

Feedback and Stimulation

According to Kunz, lack of stimulation for the feet is a major problem in our society. We box our feet in shoes and forbid them to traipse the natural environment. Some American feet never even see sunlight, much less travel naked on a forest floor. "The feet carry the body, in more ways than one," Kunz says. "Constant feedback from the feet is needed in order for the body to make the proper responses." There is no challenge for the foot in walking on flat surfaces. Feet crave stimulation, and they were built for a variety of surfaces.

The Japanese, as well as Europeans, have addressed this basic need by creating health pathways to stimulate every part of the foot. "This comes from taki fumi," Kunz says, "to step upon bamboo. Here we call them stroll pathways. The idea is that you stroll along, and as you do, you are strengthening the system. It's great exercise and gives you more endurance."

In Asia, pathways frequently feature cobblestones for stimulation, but a sandy beach or rocky hiking trail can provide variation underfoot.

Whatever path you choose, get off the pavement, free your feet, and let them do their thing. "Over thousands of years," Kunz says, "every culture has discovered it in some shape or form. The foot is it."

Scientific studies have documented the benefits of reflexology for a variety of ailments.

Magical Mango

Shelly Burns

Treating yourself to a mango is a perfect way to add some sunshine to your routine.

A mango is more than just a sweet, delicious fruit. It has properties beneficial to skin, including water-soluble vitamins like B2, B3, B6, folic acid (B9), and C. Mango is also a good source of beta-carotene and vitamin A.

Vitamin B complex delays skin's aging process. B vitamins provide a healthy glow, increased tone, and hydrated cells. The anti-inflammatory properties in B3 help skin retain moisture, alleviating dryness and irritation.

Vitamin C protects against the DNA damage that leads to skin cancer. This powerful antioxidant reduces the wrinkling effects of free radical damage, and combats other signs of aging by strengthening collagen and elastin.

Beta-carotene gives mango its wonderful

orange color and has an important role in protecting our skin's DNA. Dry, flaky skin can be remedied with the vitamin A derived from beta-carotene, which is important for repairing and maintaining healthy skin. Vitamin A has also been shown to help reduce and clear acne breakouts.

Other beneficial nutrients include magnesium, phosphorus, silica, sulfur, and vitamin E, which play a role in strengthening the connective tissue in our body, including skin, bone, hair, nails, and muscle.

Mango is not just beneficial to skin. Its nutrients reduce high blood pressure, the risk of stroke, and the chance of contracting heart disease. Mango also contains approximately 20 percent of the recommended dietary intake of fiber and enzymes, which promote healthy digestion.

Mango is especially helpful for long, dry winters, but you can enjoy it at any time

of year. It will help maintain smooth skin and a healthy glow.

Mango offers a variety of health benefits

Shea Butter

For Your Complexion and More

Shelley Burns, N.D.

Shea butter comes from the nut of the shea tree (pronounced shay) found in the tropics of Africa, primarily West Africa. It offers many benefits as a topical moisturizer for skin and hair, and improves other skin problems and appearance.

As well as providing relief from minor dermatological conditions like eczema, lesser burns, and acne, shea butter can be used as a natural sunscreen and for stretch-mark prevention during pregnancy. Other benefits include the evening out of skin tone, reducing blemishes, and restoring skin elasticity.

Shea butter easily penetrates the skin, allowing skin to breathe without clogging pores. It contains high concentrations of linoleic acid, which provide skin protection at a cellular

level, as well as vitamins A, E, and F, which protect against premature wrinkles. Vitamin F in shea butter also soothes rough, dry, or chapped skin.

Healing though it may be, shea butter undergoes a rigorous path in its journey from overseas to the faces and bodies of your clients. The fruit from the shea tree is cultivated, cracked, grilled, pounded, and boiled. The shea butter is then scooped out of the nut and left to cool.

Properties of shea butter include unsaponifiables--substances that cannot decompose into acids, salts, or alcohol. For that reason, shea butter is extremely absorbable, even more so than soybean and avocado oils.

There are three types of shea butter

extraction and just two of the three end products of these extractions should be used. Unrefined shea butter in its pure form is yellow. Refined shea butter is processed but still contains many of its natural components. Either is fine to use. Highly refined shea butter may well have lost its healing properties and can include such solvents as hexane, which may cause nerve damage. It is pure white and should be avoided. Another note of caution: shea butter is not recommended for people with nut and latex allergies, and some experts also discourage its use by people with chocolate allergies.

*Aim to live so
that you don't
look back and
think, "How
happy I was
then, if only I'd
realized it."*

-Gretchen Rubin

DUE TO STAFFING CHANGES, WE ARE CURRENTLY
OPEN BY APPOINTMENT ONLY.

Appointments Available:

Monday, Wednesday and Thursday: 10am-6pm

Friday, 8/4 and 8/18: 9am-3pm

A GLANCE AT UPCOMING COMMUNITY EVENTS!!

Range Regional Garage Sale and Birthday Party!

GARAGE SALE

Thursday, August 3rd through Saturday, August 5th: 9am -
4pm

BIRTHDAY PARTY

Saturday, August 5th: 11am - 4pm
