Children and Massage

A Powerful Parental Ally

Shirley Vanderbilt

"Every child, no matter the age, should be massaged at bedtime on a regular basis." So says Tiffany Field, Ph.D., of the Touch Research Institute (TRI) in Miami, Fla. Field and her associates at TRI have worked diligently over the past decade proving the benefits of massage for children. But this is not a new concept.

Infant massage has long been a common practice in families of Eastern and African cultures. Many indigenous tribes use some form of bodywork to soothe, relax and heal their little ones, sometimes including scented oils and herbal remedies as part of the experience. With our modern technology and hurried lives, we

fail to thrive and even die without an adequate amount of physical contact. Adults, as well, can become depressed and ill if they are isolated from this most basic of human needs. Children who learn healthy views of touch and are provided with positive tactile experience by their caregivers are more likely to grow up to be adults with healthy self-esteem, a sense of appropriate boundaries and long-lasting intimate relationships.

TRI researcher Maria Hernandez-Reif, Ph.D., says she regularly gives massage to her own daughter. When asked if other parents should do the same, she says, "Absolutely, a daily massage at least. That's what the studies show. Regardless

*How you love
yourself is how
you teach
others to love
you.*

-Rupi Kaur

Massage can cultivate a sense of well-being and security for children.

frequently find ourselves lacking in quality family time and touching each other less. The ancient practice of massage can serve to reaffirm a close bond with our children, and to convey a comforting sense of security and trust.

Touch is the first sense to develop in humans. It is essential to our health and well-being. Babies have been known to

of whether it's an infant, a child with illness, a preschooler, pregnant women, or the elderly -- no matter who we studied we have found that massage benefits all age groups and individuals of different conditions."

Kids Stress, Too

Massage is a wonderful stress-buster for children. "Oftentimes when we think about stress," Hernandez-Reif says, "we think it's just an adult condition, only adults have stress. But if you think about it, even young infants and children are prone to stress." A young child starting school who is unfamiliar with the area or children in the class will experience stress. Family illness or financial problems, divorce and even vacations can produce emotional strain. Hernandez-Reif notes that one of the consistent findings in studies of the benefits of massage therapy is a reduction in stress and stress hormone levels: "There is a relationship between stress and the immune system. If stress hormones are chronically elevated, the [hormone] cortisol will destroy the healthy immune cells that fight viruses and tumors and keep the immune system healthy. If you can reverse that, you not only reduce stress but also reduce stress hormones, allowing the immune system to bounce back and do its job, which is to heal the body and keep it healthy."

As for children's behavioral response to massage, she says, "They are happier and in a better mood. We have observed they appear more relaxed, calm and oftentimes fall asleep during massage." If it's the child's first massage, they may squirm a bit because they are not familiar with this type of touch. Due to the discomfort and pain of medical procedures inflicted on them, infants and especially premature babies may have developed a negative association with touch. Given this new, positive experience they relax and their bodies quiet down.

Infant Massage

One of the best ways to give your baby safe, positive messages about touch is to give her massage on a regular basis. Early infant massage may stimulate the developing nervous system and brain, and memory of that positive touch may then be permanently registered in the body cells. By improving circulation, respiration, digestion and elimination, massage promotes a sense of comfort in your baby and makes her less prone to colic. As the baby grows, the stroking of massage prepares the body for sitting, standing and walking by promoting

strength, motor coordination and self-confidence. Infant massage is becoming very popular with new parents and a number of resources are now available to get you started. In addition to books and videos, you can find certified infant massage therapy instructors in local private practice and at hospitals and clinics specializing in holistic medicine.

TRI's guideline of 15- to 20-minute sessions is a good rule to follow at home. Longer sessions can be overstimulating or even uncomfortable for a younger child with a short attention span.

Once massage is established as a family routine, it can benefit your child throughout his growing years. Preschoolers have shown better performance on tests of their intellectual and manual skills after a 15-minute massage. They also slept

better during naps, were less likely to be overactive, and had better behavior ratings.

For teens struggling with the growing pains of adolescence, massage helps to balance unstable hormones and can relieve anxiety by producing a state of relaxation. A supportive relationship with a massage therapist who gives them safe, unconditional touch can also increase their feelings of self-acceptance and self-confidence during those trying years.

Touch is essential to a child's development, sense of well-being, and good health. Kids reach out for touch as naturally as they do for food and water. A nightly massage can enhance the parent-child bond and ensure that touch is a positive, nurturing part of their human experience. And, as Field says, "They love it."

Giving your child a massage each day can help deepen the parent-child bond.

Relief for Computer Users

Mary Betts Sinclair

According to the American Optometric Association, 46 percent of Americans spend at least five hours a day on a computer or smartphone. When looking at a screen, many people hold their head forward of center and slouch, which puts many upper-body muscles in a shortened position.

HERE ARE SOME WAYS TO AVOID PAIN AND STRAIN:

Computer users tend to blink very little and stare straight ahead, not using their peripheral vision. Be sure to keep blinking, which washes your eyes in naturally therapeutic tears and breaks up your stare.

Take frequent rest breaks using the 20-20 Rule: every 20 minutes, spend 20 seconds looking at something far away, preferably gazing out a window. Also, stand up and move as much as possible. This is a great time to do eye-muscle stretches and range-of-motion exercises for your back and neck. Use your fingertips to gently

massage around your eyes, temples, and forehead. Finally, rub your palms together and gently cup your closed eyes. Relax and breathe freely.

Make sure you have good light, and check that your monitor is the correct distance away from your eyes and at the right height. Also, adjust the screen settings to where they are comfortable in terms of resolution and flicker.

If you wear eyeglasses, have them checked. For example, in order for some people to see clearly with their heads held in an upright and balanced position, and without chronic tightness in the back of the neck, they may need to have a prescription for a longer focal length or larger bifocal inserts, or have an adjustment of their eyeglass frames if they are bent or twisted. Some people may need a stronger or weaker prescription. If your doctor has prescribed a pair of glasses specifically for seeing the computer screen, wear them.

Take frequent breaks to avoid eye strain.

The Scoop on Sugar

Not Such a Sweet Story

Shelley Burns, N.D.

Most people have no idea just how much sugar is in the foods Americans consume. However, this sweet culprit may be behind many health issues, including skin problems. Here's why.

When refined carbohydrates, otherwise known as simple sugars, are consumed in excess, they cause an increase in blood sugar levels. This excess sugar (glucose) attaches itself to proteins and is referred to as glycosylation. All cells in our bodies have a protein component to them including our hormones, enzymes, cholesterol, and immune cells. As proteins become coated with glucose, they are unable to work effectively.

Collagen, that vital component of a glowing complexion, makes up 40 percent of the proteins in the body. Glycosylation hastens protein

cross-linking, which weakens collagen. The result: wrinkles.

But wait, there's more. Sugar also causes an increase in levels of cortisol, the stress hormone, which can interfere with hormonal balance and increase inflammation. Skin inflammation can manifest as acne, puffiness under the eyes, and eczema. Sugar also increases insulin levels and reduces sensitivity of insulin. In fact, research shows people with acne process sugar poorly, which could be a direct result of high cortisol and high insulin levels in the blood.

And finally, sugar depletes the necessary nutrients required to keep the immune system healthy. For example, sugar interferes with the way the body uses vitamin C, which is needed for the formation of collagen and elastin as well

as immunity. It can also lead to sluggish digestion, which also affects the skin.

The best way to steer clear of sugar is to read labels. Avoid products that list sugar in the first three ingredients, and be aware of words ending in "ose" such as sucrose, dextrose, and maltose, all of which are sugar indicators. Also avoid processed foods and refined carbohydrates, such as white flour, white rice, and white potatoes.

Whenever the sweet allure of sugar tempts you, remember, sugar-free is key to beauty.

*To be beautiful
means to be
yourself. You
don't need to be
accepted by
others. You need
to accept
yourself.*
